

KINSHASA, 13 May 2017 - The WHO Regional Director for Africa, Dr. Matshidiso Moeti today visited Kinshasa (DR Congo) to discuss with national authorities and partners ways to mount a rapid, effective and coherent response in order to stop the ongoing Ebola outbreak.

The visit follows notification by the DRC Government of an outbreak of Ebola virus disease in Likati health zone, Bas Uele Province, in the northern part of the country bordering Central African Republic. The Likati health zone is around 1400 kilometers from the capital. As of today, 11 suspected cases including 3 deaths have been reported.

Speaking at the meeting, Dr Moeti said: "I am here to assure the government of DR Congo that in collaboration with the UN system and other partners, we will work together to respond to this outbreak. WHO has already mobilized technical experts to be deployed on the ground and is ready to provide the leadership and technical expertise required to mount a coordinated and effective response. I encourage the public to work with the health authorities and take the necessary preventive measures to protect their health."

On 10 May 2017, a multidisciplinary team led by the Ministry of Health (MoH) and supported by WHO, under the new WHO Emergency Programme, and partners, was deployed to the Likati health zone, Bas Uele Province to conduct an in-depth field investigation. The health zone is situated in the remote, isolated and hard-to-reach northern part of the country, with limited transport and communication networks - factors that all impeded transmission of information about the suspected outbreak. Currently it takes about 2-3 days to reach the epicenter from Kinshasa.

The Global Outbreak Alert and Response Network (GOARN) has been activated to provide additional support if required. Reinforcement of epidemiological surveillance, contact tracing, case management, and community engagement are under way.

"We are grateful to WHO and other partners for the swift support in carrying out investigations that led to the confirmation of this outbreak," said Dr. Oly Ilunga Kalenga, the Minister of Health of DR Congo. "A strong multi-sectoral response, better coordination, public awareness, community engagement and adequate resources will be critical in our efforts to stop the outbreak," he added.

The first case occurred on 22 April in a 45-year-old male. He was transported by taxi to hospital and was dead on arrival. The driver also fell ill and later died. A third person who cared for the first case also became ill and has subsequently died. At present, 25 contacts of the second patient who died are being followed. Of the cases and deaths, 1 has been tested PCR-positive for Ebola.

This is the eighth outbreak of Ebola virus disease since its discovery in 1976 in the Democratic Republic of Congo. On 20 November 2014, in line with WHO recommendations, the Ministry of
