

815 million people now hungry – Millions of children at risk from malnutrition

15 SEPTEMBER 2017 | ROME - After steadily declining for over a decade, global hunger is on the rise again, affecting 815 million people in 2016, or 11 per cent of the global population, says a new edition of the annual United Nations report on world food security and nutrition released today. At the same time, multiple forms of malnutrition are threatening the health of millions worldwide.

The increase – 38 million more people than the previous year – is largely due to the proliferation of violent conflicts and climate-related shocks, according to *The State of Food Security and Nutrition in the World 2017*.

Some 155 million children aged under five are stunted (too short for their age), the report says, while 52 million suffer from wasting, meaning their weight is too low for their height. An estimated 41 million children are now overweight. Anaemia among women and adult obesity are also cause for concern. These trends are a consequence not only of conflict and climate change but also of sweeping changes in dietary habits as well as economic slowdowns.

The report is the first UN global assessment on food security and nutrition to be released following the adoption of the 2030 Agenda for Sustainable Development, which aims to end hunger and all forms of malnutrition by 2030 as a top international policy priority.

It singles out conflict – increasingly compounded by climate change – as one of the key drivers behind the resurgence of hunger and many forms of malnutrition.

"Over the past decade, conflicts have risen dramatically in number and become more complex and intractable in nature," the heads of the Food and Agriculture Organization of the United Nations (FAO), the International Fund for Agricultural Development (IFAD), the United Nations Children's Fund (UNICEF) the World Food Programme (WFP) and the World Health Organization (WHO) said in their joint foreword to the report. They stressed that some of the highest proportions of food-insecure and malnourished children in the world are now

concentrated in conflict zones.

"This has set off alarm bells we cannot afford to ignore: we will not end hunger and all forms of malnutrition by 2030 unless we address all the factors that undermine food security and nutrition. Securing peaceful and inclusive societies is a necessary condition to that end," they said.

Famine struck in parts of South Sudan for several months in early 2017, and there is a high risk that it could reoccur there as well as appear in other conflict-affected places, namely northeast Nigeria, Somalia and Yemen, they noted.

But even in regions that are more peaceful droughts or floods linked in part to the El Niño weather phenomenon, as well as the global economic slowdown, have also seen food security and nutrition deteriorate, they added.

Key numbers

Hunger and food security

- Overall number of hungry people in the world: 815 million, including:
- In Asia: 520 million
- In Africa: 243 million
- In Latin America and the Caribbean: 42 million

- Share of the global population who are hungry: 11%
- Asia: 11.7%
- Africa: 20% (in eastern Africa, 33.9%)
- Latin America and the Caribbean: 6.6%

Malnutrition in all its forms

- Number of children under 5 years of age who suffer from stunted growth (height too low for their age): 155 million
- Number of those living in countries affected by varying levels of conflict: 122 million

- Children under 5 affected by wasting (weight too low given their height): 52 million
- Number of adults who are obese: 641 million (13% of all adults on the planet)

- Children under 5 who are overweight: 41 million
- Number of women of reproductive age affected by anaemia: 613 million (around 33% of the total)

The impact of conflict

- Number of the 815 million hungry people on the planet who live in countries affected by conflict: 489 million
- The prevalence of hunger in countries affected by conflict is 1.4 - 4.4 percentage points higher than in other countries
- In conflict settings compounded by conditions of institutional and environmental fragility, the prevalence is 11 and 18 percentage points higher
- People living in countries affected by protracted crises are nearly 2.5 times more likely to be undernourished than people elsewhere

Note to editos

This is the first time that UNICEF and WHO join FAO, IFAD and WFP in preparing *The State of Food Security and Nutrition in the World* report. This change reflects the SDG agenda's broader view on hunger and all forms of malnutrition. The UN Decade of Action on Nutrition, established by the General Assembly, is lending focus to this effort by motivating governments to set goals and invest in measures to address the multiple dimensions of malnutrition.

The State of Food Security and Nutrition in the World 2017 has been re-gearred for the SDG era and includes enhanced metrics for quantifying and assessing hunger, including two indicators on food insecurity and six indicators on nutrition.

The heads of agencies issuing today's report are: José Graziano da Silva, Director-General of FAO; Gilbert F. Houngbo, President of IFAD; Anthony Lake, Executive Director of UNICEF; David Beasley, Executive Director of WFP; Tedros Adhanom Ghebreyesus, Director-General of WHO.
