Addis Ababa, Ethiopia, 21 August 2016 – By 2030, the African Region wants to eliminate viral hepatitis as a major public health threat. With the launch of the document "Prevention, Care and Treatment of viral hepatitis in the African Region: Framework for action 2016–2020", WHO provides guidance to Member States in the Region on how to implement the first-ever Global Health Sector Strategy on viral hepatitis, which was adopted last May at the World Health Assembly.
